SYNTHETIC MONOCOMPONENT ALKYDIC PRIMER ANTIRUGGINE

Antiruggine is a corrosion resistant primer for metal surfaces, formulated on modified alkyd-based resins. The product prevents corrosion of interior and exterior ferrous metal substrates. It is characterized by good adhesion to surfaces, excellent spread rate and flexibility, and is easy to apply;

therefore it is ideal for do-it-yourself applications where it is normal to use a brush. Antiruggine is applicable on ferrous metals, old or painted iron surfaces like gates, railings, metal fixtures, etc. As it is a primer, it must always be recoated with a synthetic finishing system.
